

DHURGA JAYACHANDRAN

+91 7868895374 | djg1305@gmail.com | Tamil Nadu | github.com/dhurga-13

Education

Vellore Institute of Technology, Vellore

M.Tech Integrated Software Engineering

2023 – 2028

CGPA: 8.95

Technical Skills

Programming Languages: Python, Java

Web Technologies: HTML, CSS, JavaScript, React

Databases: MySQL, Oracle

Tools: Git, VS Code, Firebase

Core Concepts: Data Structures, Object-Oriented Programming, DBMS, Computer Networks

Domains: Machine Learning, Web Development, Data Mining

Projects

AI-Powered PCOS Care Platform (SIH 2025)

Python, TensorFlow, Flask

- Developed an AI-based healthcare platform for PCOS management with features for cycle tracking, diet planning, and fitness monitoring.
- Designed a personalized recommendation system using user health data and predictive analysis.
- Built a scalable backend and user-friendly interface for real-world usability.

AI Travel Buddy (Hackathon)

React, Firebase, REST APIs

- Built an AI-powered travel planner with dynamic user profiling based on budget, preferences, and interests.
- Integrated APIs and real-time data sources to generate personalized travel recommendations.
- Implemented ranking logic to suggest destinations based on relevance, popularity, and distance.

Phishing Website Detection System

Python, Scikit-learn, Pandas

- Developed a phishing detection model using classification algorithms and feature extraction techniques.
- Performed preprocessing, feature engineering, and model evaluation to improve accuracy.

DormAid – Hostel Assistance Platform

HTML, CSS, JavaScript

- Built a web platform to streamline hostel service requests and improve student support systems.
- Designed an intuitive interface to enhance usability and accessibility.

EV Charging Station Optimization & Management System

Python, JavaScript, Node.js

- Developed an intelligent EV charging system using Particle Swarm Optimization (PSO) for efficient scheduling and load management.
- Integrated solar energy data and implemented priority-based vehicle scheduling for optimized resource utilization.
- Designed a responsive interface with real-time monitoring and enforced grid constraints for realistic system performance.

Cybersecurity Investigation Platform

HTML, CSS, JavaScript, Node.js, VirusTotal API, Gophish

- Developed a cybersecurity investigation platform combining phishing simulation and malware analysis for threat detection and awareness.
- Integrated VirusTotal API for multi-source threat scanning across URLs, files, IPs, and hashes.
- Built a Node.js backend for secure API handling and a modular dashboard for clear visualization of threat data.

Relevant Coursework

- | | |
|----------------------------------|---------------------------|
| • Data Structures and Algorithms | • Artificial Intelligence |
| • Operating Systems | • Deep Learning |
| • Database Management Systems | • Software Engineering |
| • Computer Networks | • Web Development |

Extracurricular Activities

IEEE TEMS Student Chapter Member

Organizing Committee Member – Rivera and Gravitas, VIT Vellore

Basic audio editing (Adobe Audition) and video editing (VN, CapCut)
